LÉKUÉ

GOOD *FOOD* MADE EASY

We are designers offering unique and efficient solutions to products, gadgets and utensils of high quality and durability which will help you in the kitchen, thanks to smart design and will even change the face of traditional cooking.

We revolutionise microwave cooking with our Microwave Cooker and the introduction of platinum silicone in an extensive range of products for different types of cooking - something unthinkable ten years ago and nowadays essential.

Our products always arouse our customers' curiosity, along with an element of surprise and delight.

At Lékué, we also offer trending content, ideas, recipes and more... we create innovative and sustainable solutions to make cooking easy and healthy.

Lékué products can be found in thousands of kitchens worldwide. Despite its international presence, if a customer or distributor wants a special specification, we are open and flexible; at Lékué we like to find ad hoc solutions.

about LÉKUÉ

CODE OF CONDUCT

***Design and manufacture
Innovation and quality***

Excellence in quality, regulations and certifications.

Knowledge and innovation as values.

Protection of intellectual property.

***People Commitment,
diversity and inclusion***

Commitment to fair employment, health and safety conditions.

Universal, diverse and inclusive organization.

***Environment Sustainability
and commitment***

Environmentally friendly activities.

Willingness to reduce environmental impact.

Sustainable resources management.

***External relations
Ethical relationships***

Belief in open and fair competition.

Ethical standards in its business relationships.

SELECTIVE DISTRIBUTION

Lékué Internacional has chosen a selective distribution arrangement in order to limit, as much as possible, changes to its recommended RRP, with a view to best marketing its products. For this reason, Lékué Internacional does not allow its customers to sell these products through other platforms acting as "Market Place", and restricts its customers' online sales to the website of their own brand.

Our operations are carried out under an ethical and responsible prism.
Lékué and its employees are governed by law and follow company-specific internal rules and regulations.
In any relationship with Lékué, all the parts will receive a fair and dignified treatment.

Lékué is committed to the

MATERIALS

At Lékué we are committed to the environment, and we work to minimize our environmental impact. Wherever possible, we apply practices that respect the environment, such as using recyclable and durable materials and reducing the amount of waste we generate, among others.

Platinum Silicone

1

What is Platinum Silicone?

Silicone is an odourless, colourless polymer composed mainly of silicon, which is found naturally in sand, quartz and rocks. It is flexible, resistant and withstands high temperatures. Platinum Silicone is a type of silicone that only uses platinum as a catalyst, which provides superior quality. It is the ideal material used to manufacture molds or products suitable for food preparation. It is absolutely safe, even for baby bottle teats!

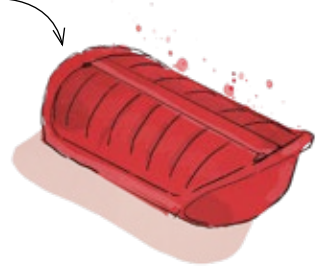

3

Is cooking safe?

Cooking with Lékué's platinum silicone molds is completely safe; they don't leave residues and don't alter the flavour of food. All the products comply with the quality, technical and design specifications that guarantee durability. Also, Lékué collaborates with professional chefs in the design of each product based on initial trials to cook real recipes in order to guarantee perfect functionality and ergonomics.

Safe in contact with food

2

How is the quality of the Platinum Silicone and Lékué products guaranteed?

Lékué purchases its platinum silicone following the strict manufacturing controls that guarantee compliance to the most restrictive regulations for products in direct contact with foods from Japan, Switzerland, Germany, France and the US. All Lékué products are regularly analysed by independent laboratories to certify that they are safe for food use.

4

What is the maximum temperature Lékué silicone products can withstand?

Products manufactured with platinum silicone withstand high temperatures: -76°F and 428°F. Its versatility and ability to withstand to high temperatures make it safe to use in the microwave, oven, dishwasher, refrigerator and freezer.

5

What are the advantages of Lékué's silicone molds?

Lékué's products are non-stick, they do not require greasing, making unmoulding easier. You save calories because you don't need to add extra butter and/or oil. In addition, you can easily fold and store the products made with this flexible material without deforming them, so you save space in the kitchen. Silicone doesn't break like glass and doesn't rust like metals.

6

Is Platinum Silicone easy to clean?

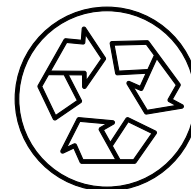

Platinum silicone repels water and germs so, apart from easy maintenance, it guarantees maximum food hygiene and safety.

7

What is Bisphenol? Are Lékué products BPA free?

Bisphenol-A is a compound used to make certain plastics. This compound has currently many applications in the building, automotive, and medical sectors, among others. Lékué products are mainly made of platinum silicone, and contain no bisphenol, which ensures that they pose no health or environmental risks, generate no waste, and do not change the taste of food.

8

How is Platinum Silicone disposed of?

Since it is a non-toxic and inert material, Platinum Silicone has minimal impact on the environment and can also sometimes be recycled and reused (for example, for pieces of urban furniture or for children's playground floors). For more information on how to dispose of Platinum Silicone, please check the legislation of your place of residence.

9

What is the shelf life of products manufactured entirely with Platinum Silicone? Lékué products manufactured entirely with Platinum Silicone have a shelf life of 10 years. Always follow the recommendations specified for each product and check the warranty period.

Plastic

1

What is plastic?

Plastic originates from organic compounds derived from petroleum or other natural substances. There are currently over 2000 types. They are synthetic materials that can be used in numerous everyday objects such as toys, remote controls, food packaging, computer peripherals and car parts, among others.

2

Is it really safe for plastic to come into contact with food?

Plastic is one of the most widely-used materials in the food industry, especially in the production of food packaging. This is why they have been more strictly controlled and monitored by the European Commission, to ensure that these materials are safe and do not alter the food in any way and therefore do not pose a threat when it is consumed.

- EFSA
- FDA
- LFGB

Safe cooking

3

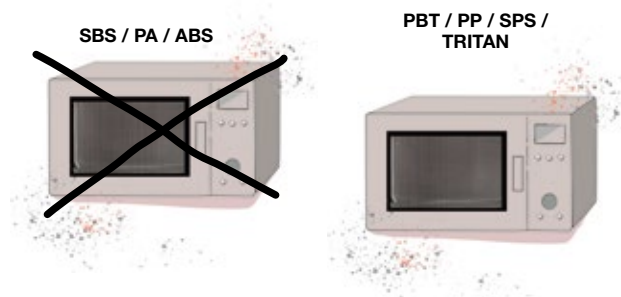

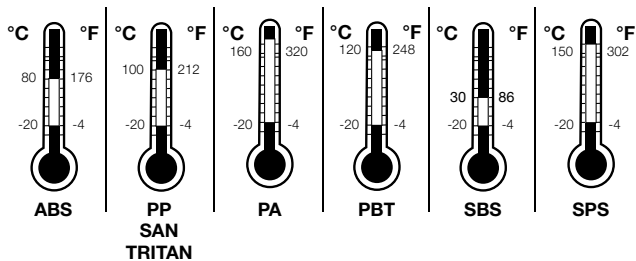

How is the quality of the plastic and Lékué products guaranteed?

Lékué is supplied with plastics that undergo rigorous manufacturing controls which guarantee that they comply with the strictest international standards for products that come into direct contact with food, according to the EFSA (European Food Safety Authority) for the European Union and the FDA for the USA. All Lékué products are regularly analysed by independent laboratories to certify that they are safe for food use (LFGB).

4

Is cooking safe?

Lékué's plastic products coming into contact with the food during cooking is completely safe. They all meet the technical, quality and design requirements necessary to guarantee safe cooking. Furthermore, before any product is launched, thorough cooking tests are performed to verify their functionality and ergonomics.

5

What is the maximum temperature tolerated by plastic?
 The Lékué range includes various kinds of plastics, depending on their use. A specific temperature is specified for each plastic, as summarised on the table above.

6

Can it be used in microwave ovens?
 Not all plastics are suitable for use in microwaves. This is why the type of plastic chosen for Lékué products depends on what they will each be used for, and it is necessary to follow our recommendations for proper use and operation.

Durability

7

What are the main advantages of the plastics used by Lékué?
 In addition to the correct use of the material, Lékué researches the main characteristics or properties necessary for each product to facilitate each step, and therefore meet the needs of the consumer. In case of plastic, the main characteristics are strength, lightness and durability for safe and practical use.

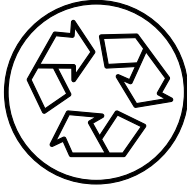

Use neutral soap / Not exceed the temperatures

8

Is plastic easy to clean?
 All plastics used in the manufacture of Lékué products are very easy to clean. This can be done by hand with a neutral soap, without using abrasives. A dishwasher is only recommended if it can be programmed at temperatures that do not exceed those specified on the above table and if they are placed on the top shelf of the dishwasher, unless they are products made from SBS plastic, in which case they are not suitable for dishwashers.

Plastic

9

How many types of plastic are there and how are they classified?

There are numerous types of plastics that are classified according to a number coding system which appears in the centre of this international symbol. This symbol indicates the right way to recycle it and its environmental impact. All our plastics are 100% recyclable. For more information on how to dispose of plastics, check the legislation of your place of residence.

10

What is Bisphenol? Are Lékué products BPA free?

Bisphenol-A is a compound that is used in the production of Polycarbonate (PC). However, none of the plastics used in Lékué products contain Bisphenol, guaranteeing that there is no risk to health.

11

Which is the shelf life of products manufactured with plastic?

High-quality plastics used during manufacturing and proper use of the products ensure a shelf life of several years. Always follow the recommendations specified for each product and check the warranty period.

Borosilicate glass

1

What is borosilicate glass and how can it be used?

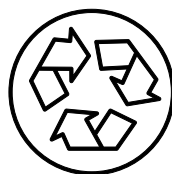

Borosilicate is a special type of glass that has multiple uses, mainly manufacturing chemical laboratory instruments, kitchen instruments, and reusable bottles.

2

What is the main advantage of borosilicate?

Compared to ordinary glass, borosilicate has an extremely low thermal expansion coefficient, which makes it very resistant to high temperatures and thermal shocks.

3

Borosilicate does not contain Bisphenol A or any other toxic element, it is one of the safest materials for cooking and storing food, and it is also 100% easily recyclable.
